

NDLAMBE MUNICIPALITY
NDLAMBE IS A WATER SCARCE AREA

WARD 3 & 4-WATER RESTRICTION NOTICE

The water supplied to Kenton, Ekuphumleni, Boesmansriviermond, Riversbend, Marselle and Merry hill all comes from a reverse osmosis plant and our boreholes. However, the current water demand is higher than our plant capacity, consequently the reservoir levels are critically low and urgent intervention is required to conserve the remaining water. Therefore, the municipality together with its stakeholders has exhausted all options to alleviate these challenges, hence water restrictions were agreed to be implemented as follows:

- The water supply will be shut down from **10am to 4pm** and **10pm to 4am** in order to regain a healthy status on these reservoirs.

Every effort is being made by Ndlambe Municipality, and our service provider, Amatola Water to expand our water production plant and repair all leaks and we trust that the situation should improve if the community jointly works with us in conserving water and minimizing our water consumption.

It is an imperative that every household and business install rainwater tanks. This will greatly assist in storing water in the peak holiday seasons when our reservoir capacity comes under pressure from the influx of visitors.

The municipality will assist with water tankers to supply potable water to community members within all the above the affected areas, during the water restriction period.

Use water sparingly
